Cytidine deaminase induced by B-cell-specific activation may be significant in both class switching and somatic hypermutation.

The Perils of prophecy

In the end, a workshop, based on sequence, decides which new allele goes into which serogroup either by sequence or by reactivity. Most of these changes result in a change in the amino acid sequences that result in slight to major functional differences in the protein.

The Perils of prophecy

Each B lymphocyte produces only one type of antibody receptor on its surface. It was an ancient astrological symbol of commerce and is associated with the Greek god Hermes, the messenger for the gods. Thus, a completely described allele may be up to 9 digits long, not including the HLA-prefix and locus notation.

The Perils of prophecy

For example, HLA A9 serotype recognizes cells of A23- and A24-bearing individuals.
