Because CO<sub>2</sub> is the only source of carbon for calcite, the carbon isotopic evolution follows a single-component fractionation trend.

Crosscutting relationships and xenoliths suggest that, at least at the present level of exposure, some of the fenites formed early because they occur as megaxenoliths within the magmatic gneiss Fig. Kimberlite is an ultramafic and ultrabasic rock type defined by textural and compositional attributes. In this contribution, field, petrographic and whole-rock geochemical data of Sullya syenites and associated mafic granulites from the Mercara Shear Zone MSZ , which separates low-grade greenschist to upper amphibolite facies Dharwar Craton and high-grade granulite facies Southern Granulite Terrain is presented.

Hyvönen, in , 2015 Abstract The Sokli carbonatite complex is one of 22 alkaline complexes comprising the Devonian Kola alkaline province KAP. Unaltered kimberlite consists of large rounded-to-anhedral crystals of olivine and other mafic minerals set in a finer matrix.

In contrast, however, oxygen is contributed by CO<sub>2</sub> and H<sub>2</sub>O, thus resulting in a two-component fractionation. It is widely believed that alkalic rocks are characterized by the presence of normative nepheline as well as by the absence of orthopyroxene and pigeonite. Although alkaline rocks are known to be characteristic also be maintained that as the alkaline varieties have the of stable, intra-plate environments, it is becoming clear most extreme compositions of all igneous rocks, so an that they also play an important role in the igneous activity concentrated at plate margins.

These fluids evolved to aqueous-rich fluid at low temperature though a CO<sub>2</sub>-rich fluid at high to medium temperature, which was responsible for REE precipitation. The geology and genesis of the Bayan Obo Fe-REE-Nb deposit: a review.

The isolated body of the Sullya syenite, similar to other alkaline plutons of the Southern Granulite Terrain, shows an intrusive relationship with the host hornblende-biotite gneisses and mafic granulites. Rudnick R L, Elsevier 3 1—64. Their geographical and chronological distribution.
