Analysis of Injuries in the Ghanaian Mining Industry and Priority Areas for Research

Some hazards, such as ground instability, are inherent in the underground environment. This effort builds on an initial study while expanding the data base and including additional variables and analyses. Only goods and services traded between entities or sold to end consumers are included.

Health and Safety Hazards : Mining Health, Safety and Prevention Review Final Report

Wrist, hand, and finger injuries are prevalent among miners.

Occupational injuries and fatalities in copper mining in Zambia

METAL/NONMETAL MINE FATALITY - On April 22, 2002, a 23 year-old drill operator with one year mining experience was fatally injured at a dimension stone quarry. The victim was drilling in the quarry when his clothing became entangled in the rotating drill steel.
