Ethics and Economics

Furthermore, only a few studies can break down their results by race and socioeconomic status; yet there may be important differences across groups. Some participants explained that having access and exposure to healthy food can make a difference in many African American communities. But what if these are the students most in need of hearing the authoritative expression of such a value judgment? This format involved using pre-determined probes, such as brief open-ended questions or clarification statements to help participants elaborate on some important themes.

Also, because our current political landscape is characterized, in part, by a public that is increasingly disturbed by taxpayers subsidizing soda purchases for SNAP recipients and then, later, finding themselves at risk for subsidizing the costs of associated obesity-related health care needs, there may be political benefit in SNAP identifying and employing strategies to improve the health and nutrition of SNAP recipients in ways that are effective and consistent with dietary guidance.
