

Readings in statistics for the behavioral scientist.

Holt, Rinehart and Winston - Readings in statistics : for the behavioral scientist / edited by Joseph A. Steger

<p>BEHAVIORAL NEUROSCIENCE: PSY 4931-621 Spring 2014</p> <p>University of South Florida Sarasota-Manatee</p> <p>Instructor: Kimberly A. Bedichuk, Ph.D. Office: HSS 101-305 Phone: 141-305-4451 kbedichuk@usf.edu Office location: CSM-C242</p> <p>Class Time: Tues 4:30pm - 10:15am Classroom: CSM-C242 Office hours: Tuesdays 12:00pm - 2:00pm Also by appointment</p> <p>Required readings: As expected of all students, we have an expectation that you will read the assigned readings, including the primary and secondary literature, as well as any additional readings assigned. These readings will include both psychological research and, where relevant, research methods papers. Students should attend the background and research methods lectures, as well as the weekly discussion sections. The course will also include a presentation on Psysch 2544 (Psychological Statistics), and Psysch 3213 (Research Methods in Psychology).</p> <p>Required readings: Assigned readings will be posted on Canvas.</p> <p>BAs in Psychology Mission</p> <p>The Bachelor of Arts in Psychology degree from USF Sarasota-Manatee prepares graduates for the many opportunities available in the field of psychology. The program emphasizes the study of human behavior (and its development) and graduate degree programs open to Psychology majors. By the time our majors are ready to pursue graduate studies, they will have completed a solid foundation in the basic concepts of psychology, the critical skills required for the production and consumption of psychological research. These skills include the ability to design and conduct experiments, analyze data, and write reports. Majors will have the opportunity to take a capstone course that allows them to demonstrate these competencies.</p> <p>Competencies</p> <ol style="list-style-type: none"> 1. Knowledge and Application: Knowledge of concepts and theories in at least 4 areas of psychology, including: Biological Psychology, Cognitive Psychology, Developmental Psychology, Neuropsychology, Cognitive Behavioralism, Social, Personal, and Personality; and related concepts such as memory, perception, learning, motivation, emotion, personality, social interaction, and cognitive development. 2. Domains: Recognition of the impact of human diversity (gender, race, ethnicity, socio-economic status, marital status, sexual orientation, age, etc.) on psychological processes and psychological outcomes. 3. Ethics: Knowledge of professional ethics in the use of research subjects. 4. Critical Thinking: Ability to critically evaluate various methods and designs, including their strengths, weaknesses, and applications to psychological inquiry, and the role of causal hypotheses. 5. Communication: Ability to effectively produce writing work in the APA or standards. <p>Course Descriptions and Prerequisites</p> <p>This course is designed to introduce a background in behavioral neuroscience. Topics covered in the course will focus on specific techniques and procedures used in behavioral neuroscience experiments. Specific techniques include: operant conditioning, classical and operant extinction, reinforcement, punishment, assessment scales, social desirability, drug-testing, autonomic, laboratory, wireless data, neurogenesis, and psychopathology. Specific topics include: anxiety, depression, schizophrenia, depression, anxiety and cognitive deficits. Course materials will be provided by a textbook or a technique followed by short presentations and a round-table discussion of articles.</p> <p>Course Objectives:</p>
