The American Psychiatric Association Publishing Textbook of Personality Disorders by Andrew E. Skodol MD, Hardcover

The first, and most consistent with the theoretical and psychometric tradition within which the FFM developed, is simply to identify personality pathology by extreme values on each of the five factors and perhaps on their facets.

Review of the american psychiatric publishing textbook of personality disorders

Despite the unsettled nature of the classification, many chapters contained within this textbook bear powerful witness to advances in the understanding of personality disorders and to a very solid body of treatment research. Others, however, seek help for problems ranging from self-destructive behavior to anxious social isolation to just plain chronic misery, and many of these patients have specific or mixed PDs, often coexisting with other conditions such as mood or anxiety disorders.
