A History Of (Communications) Networks

Early networks used that required rigid routing structures prone to. In 1992, yet another reorganization took place.

History of the Internet

The management of Internet address space

remained with the regional Internet registries, which collectively were defined as a supporting organization within the ICANN structure. So much of what happened was done verbally and on the basis of individual trust. In the late 1970s, recognizing that the growth of the Internet was accompanied by a growth in the size of the interested research community and therefore an increased need for coordination mechanisms, Vint Cerf, then manager of the Internet Program at DARPA, formed several coordination bodies — an International Cooperation Board ICB , chaired by Peter Kirstein of UCL, to coordinate activities with some cooperating European countries centered on Packet Satellite research, an Internet Research Group which was an inclusive group providing an environment for general exchange of information, and an Internet Configuration Control Board ICCB , chaired by Clark.

Internet

In the early 1970s email makes the jump from timesharing systems — each with perhaps a couple of hundred users — to the newly burgeoning computer networks. I really recommend this book to all readers dealing with the history of telecommunications. Digital mobile networks had been pioneered by ARPA from the early 1970s for military use, but early cell phone networks for consumers are analog.

A Timeline of Database History

Commercial packet networks were introduced in the 1970s, but these were designed principally to provide efficient access to remote computers by dedicated terminals.
