Geological, petrological and geochemical characteristics of granitoid rocks in Burma: with special reference to the associated W□Sn mineralization and their tectonic setting

From a distance they looked like statues, horses, torsos and I do not know what kind of ghosts. Successful methods for the exploitation of these deposits, in contrast to the rich ores of lode type, were only developed at the beginning of the twentieth century.

Burma books

Comparable Wenlock and Ludlow communities were defined by Calef and Hancock 1974 , and their distributions were charted in the Wenlock by Hurst et al. In the northern part of the massif, three boreholes reach the Silurian in Belgium, and only one in the Dutch sector of the North Sea Legrand, 1967; Verniers and Van Grootel, 1991.
