Jostedalsbreen: How To Visit Norway's Epic Glacier

Located in Nordland county, Svartisen is the collective term for two different glaciers: Vestisen and Østisen. You will also learn how to interpret snow samples, measure glaciers, take ice cores, and use remote sensing to determine glacier change. Huge variation is found in the width of these moraines.

In Norway, Glaciers Are Growing Bigger

Due to the formation of other layers of ice on the top heavy debris keeps deposited in the lower layers but it also moves with the movement of glacier while moving various types of erosion and friction process are carried out by the glacier. Goats that were observed resting in shade did not have significant reductions in respirations. It is located in Fjærland in Sogndal municipality and is easy to see from the Rv5 when driving.
