The specimen numbers from the two collections overlap and are distinguished by their respective institutional acronyms. Many other paleontologists have collected and described Permian vertebrates, but the leading student of Texas Permian vertebrates was A.

Vertebrate Paleontology and Evolution

VERTEBRATE PALEONTOLOGY AT CARNEGIE MUSEUM OF NATURAL HISTORY The mission of the Section of Vertebrate Paleontology at Carnegie Museum of Natural History is to increase scientific understanding of fossil vertebrates through original research, to collect and preserve fossil vertebrates through field exploration and curation of our collection, and to communicate the excitement of scientific discovery through museum exhibitions, public education, and outreach efforts. WH Freeman and Company, New York. Species — A search for a specific epithet without providing a generic epithet in the Taxon field above may return record results of quite unrelated taxa.

TSHA

From the 1930s to the 1960s professional collectors working for the Childs Frick Laboratory of New York City collected mammals from a number of sites in the Panhandle, as did workers for West Texas State University in Canyon. Much of the subsequent work has been to map the relationship between fossil and organisms, as well as their history through time. Vertebrate paleontology is the study of vertebrate fossils, from primitive fishes to mammals.

Best Vertebrates

The reptilian changes and adaptations to diet and geography are chronicled in the fossil record of the varying forms of Romer, of Harvard University, who studied and reported on fossils from north central Texas from 1936 until his death in 1973.

TSHA

The fossil record shows aspects of the meandering evolutionary path from early aquatic to , with a host of , though there are still large blank areas. Probably the most important of these is the skull of a primitive, monkey-like primate that seems to be intermediate between the lemurs and the

monkey group that now lives in South America. Remains of fossil mammals probably occur in almost every county in the state.

Vertebrate paleontology

Specimen Acronym— After the Natural History Museum of Los Angeles County LACM acquired the California Institute of Technology CIT Vertebrate Paleontology collections, the Caltech original specimen and locality catalogue numbers were retained. Case collected in the Lower Permian of Texas for the University of Michigan and the University of Chicago.
