Among many planetary scientists, there has been a shift in perspective, from understanding the solar system as one of two regions with nine planets to understanding it as one of three possibly four, including the Oort Cloud regions with a much larger number of planets. Summative assessments include the performance task, which can be used to provide a framework for the unit of study, and a bank of items from past Regents exams, aligned to the current unit.

New theory to explain why planets in our solar system have different compositions

There are similar but smaller volcanoes on Earth and Venus. Chemical Geology 2019, 511 , 81-90.

The Formation of the Solar System

They will not have glistening Silver Moons orbiting silently through space around them, but only small dull rocks whizzing in orbit.

Early Composition of the Solar System Explained

Much better models sensitive new instrumentation and better understand- of streamflow and associated erosion and transport ing of causes,

geologists are moving toward predictive are needed if we are to accurately assess how human capabilities for volcanic eruptions.

New Worlds in a River of Young Stars Discovered by NASA's Transiting Exoplanet Survey Satellite

In a world where global change has become an international issue, this book provides a several billion-year evolutionary perspective on what the environment and environmental change means to life.
