Mathematics (MATH) < University of Colorado Boulder

Career opportunities available to you after graduating from this brand new plan are listed below. The main goal is to review the mathematics curriculum currently taught in secondary schools and the corresponding curricular materials and instructional strategies with an emphasis on content knowledge for teaching. Solution by separation of variables, Green's function, and variational methods.

What to Know About Business Math

Economists often wrestle with competing models capable of explaining the same recurring relationship called an empirical regularity, but few models provide definitive clues to the size of the association between central economic variables. Topics include autocorrelation analysis, filtering time-series data, basic stochastic models, univariate time-series models, stationary models, non-stationary models, and long-memory processes. P - and or POI.
