Install dual systems Part III: Win 10 +Linux Ubuntu 16.04

Thank you for quick reply! Thu May 14, 2020 2:46 am Just install the CYX-ubuntu16. I'm asking because I've already tried several Ubuntu distros, but bluetooth doesn't work fine while the PC stick is connected to the wifi; plus bluetooth audio stream is broken. Bluetooth keyboard and mouse work fine, but bluetooth sound streaming doesn't work at all.

Zogoibi, novela humorística (Book, 1926) [tools.github.ffxiv.cn]

Two of those links must be incorrect; please fix that.

If not, you can save me the trouble. The problem is: when I'm connected to wifi and browsing the web, my bluetooth keyboard misbehaves repeats every keystroke one hundred times and my bluetooth mouse has big latency even at less than 1 m from the mini PC , whereas under Windows 10 everything works fine.

Anyway, my present Ubuntu install already has a working bluetooth and wifi I installed manually the nvram firmware for the chip : I can use bluetooth mouse and keyboard, and also wifi. I ask because the two links -one for each platform- at the very beginning of the post take to the

opposite download with respect to the same two links a few lines below. Particularly I'd like to know whether the bluetooth+wifi combo chip will work flawlessly under this Ubuntu.
