Harper - The Development of Delinquency

The effects of "personal control" and "social control" on delinquency

Personal control denotes how the juvenile manages to resist using social unacceptable methods to reach his goals. This assessment of the individual control is based in the psychological diagnosis of the development of the "super-ego". In this case conformity means that the individual accepts the rules and norms as his or her own, or submits to them as a rational control of behaviour in a social setting – a healthy super-ego. Delinquency denotes the opposite of this.

3 Ways to Prevent Juvenile Delinquency

If kids are involved in healthy and safe school-sanctioned activities, they're less likely to drop out of school or become involved in unhealthy relationships. Most delinquents do not become chronic offenders. Family Influences In assigning responsibility for childrearing to parents, most Western cultures place a heavy charge on families.

Despite the intuitive appeal of retention as a mechanism for improving student performance, the retention literature overwhelmingly concludes that it is not as effective as promotion. If the police searched the gym shooters home without a warrant and took evidence then that evidence should be inadmissible, even if that means they cannot win the case. A number of studies have consistently found that as the seriousness of offending goes up, so does the seriousness of drug use as measured both by frequency of use and type of drug see Huizinga and Jakob-Chien, 1998.

These disparities occur whether placements are based on standardized test scores or on counselor and teacher recommendations. Furthermore, reductions in delinquency between the ages of 15 and 17 years appear to be related to friendly interaction between teenagers and their parents, a situation that seems to promote school attachment and stronger family ties Liska and Reed, 1985.

Difference between juvenile delinquency prevention and juvenile delinquency control?

Informal tracking is common in elementary schools. By entry into kindergarten, the majority of children have learned to use other means than physical aggression to get what they want and to solve conflicts.

Arboleda-Flórez, in , 2001 The study of delinquency is based on an understanding of psychopathology, biological factors, and social circumstances that converge at a given time on an act judged criminal according to the laws governing the group. The findings are true for girls as well as boys, and for black as well as for white children.

Delinquency Management

It may be more fruitful to construct intervention groups so that low- and moderate-risk youth are included with their high-risk counterparts to minimize the possibility of deviancy training and harmful intervention effects. An association between perinatal risk factors and violent offending is particularly strong among offenders whose parents are mentally ill or very poor Raine et al.

Social Control Theory (Criminology Theories) IResearchNet

Hyperactivity, attention problems, and impulsiveness in children have been found to be associated with delinquency. The geographic concentration of crime occurs at various levels of aggregation, in certain cities and counties and also in certain neighborhoods within a given city or county.
